Reopening of Prosecution after Appeal Brief

In view of the Appeal Brief filed on 8-22-2008, PROSECUTION IS HEREBY REOPENED. New grounds for rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

/N. Drew Richards/

Supervisory Patent Examiner, Art Unit 2895.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

Art Unit: 2895

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3, 20-23, and 40 are rejected under 35 U.S.C. 102(e) as being anticipated by Ellenbogen et al (US 6,348,700).

Ellenbogen et al discloses forming monomolecular conductors, gates and diodes (col. 1, lines 7-10), which provide a molecular switch (col. 3, lines 60-64). The molecule is between terminals or contacts made of a metal such as gold (col. 8, lines 65-67 and col. 9, lines 1-3). Aliphatic bridging groups connect aromatic and electron donating and electron withdrawing groups (col. 1, lines 14-20). The aliphatic group is insulating and provides a barrier which is amenable to tunneling (col. 1, lines 14-23 and col. 8, lines 61-67 and col. 9, lines 1-25). The delocalization of the pi bonding orbitals results in a conduction band (col. 2, lines 62-67 and col. 3, lines 1-8) energy state. The aliphatic chains which are inserted in portions of the molecule make rotation possible (col. 3, lines 10-20, 25-37, and col. 4, lines 35-65 and col. 6, lines 3-7). The transition of the molecular switch is provided by the pi orbital conjugation and is of the HOMO LUMO type (col. 9, lines 15-23).

***Allowable Subject Matter***

Claims 4-19, and 24-39 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
